Dear justice Department: Microsoft has stole,pirated, and crumbled companies with their literally stealing the work of many software developers. It also has a strangle hold on a large part of the hardware companies that threaten Microsoft. The Microsoft system is a drag on many users, due to the unreliability of Microsoft Windows crashing, hard to recover your computer to open, and run after multiple crashes. Having to call for help, that you are charged \$34.00 per hour for over the phone assistance to get your lousy Microsoft Windows back up and running from their technicians. It is a said situation the way Microsoft has a strangle hold on computer users. Please free computer users to have a open source operating system (example Lynux), and open Microsoft's hold by having the coding all of their software. Their software to where you have no choice but to be in a stangle hold of MICROSOFT. It is a situation computer users deserve better in these United States of America.
